DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Eugene Lieberstein on January 07/2008.

2. The Application has been amended as follows:

a)

Abstract

A device for taking ultra-high frequency hydrometric measurements ~~which includes means for~~ by generating sine wave trains of incident wave(s) at frequencies assuming several values in arithmetic progression between a few MHz and a few GHz, and has at least one ultra-high frequency cable. The cable includes at least two measuring stations (4) spaced along the cable a predetermined distance apart, ~~with~~ each measuring station (4) having a measuring cell (14) and a separator device capable of only sampling a portion of the incident wave(s) with sufficient energy for each measuring cell to send back an echo measurable by electronic read-out means device so that the sampling of the incident wave(s) by each measuring station occurs essentially simultaneously. Each measuring cell (14) consists of a an ultra-high frequency line portion with its distal end terminated by a short circuit and with the line portion having a circumferential external

~~wall which is either porous or provided with ports. The dielectric of the line portion consists essentially of a sample of homogeneous dielectric material for which permittivity is a monotonous function of the hydrometry in the relevant measurement domain~~

b) The following changes to the drawings have been approved by the examiner and agreed upon by applicant:

In figure 5, box # 41, label: -- Multiplexing --

box # 46, label: -- Computer System --

In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes.

Allowable Subject Matter

3. Claims 1-18 are allowed.

4. The following is an examiner's statement of reasons for allowance:

The prior art of record does not teach or suggest a device for ultra-high frequency hydrometric measurements having at least one ultra-high frequency cable including at least two measuring stations within said cable spaced along the cable a predetermined distance apart from each other with each measuring station having a measuring cell and a separator device capable of only sampling a portion of the incident wave(s) with sufficient energy for each measuring cell to send back an echo measurable by electronic read-out means so that the sampling of the incident wave(s) by each measuring station occurs essentially simultaneously, and electronic read-out means for measuring the echo sent back from each measuring cell and determining, from signals having traveled through the ultra-high frequency cable, values of the real and imaginary parts of the

permittivity, in order to determine the measurement of humidity and temperature by correlation with tables of values experimentally, as recited in the independent claim 1 and in combination of the claims.
